

MI Interface: Roadmap to Integration

Following are the steps Radian takes to build a new MI interface or add a customer to an existing interface.

Building a New MI Interface

1. Kick-Off Call

Prior to the initial meeting, we'll provide you with a package of materials that includes data requirements, interface process flow and test cases. Then we'll host a conference call to kick off the project and gather the following information:

- Timeline
- Format
- Communication method
- Protocol
- Contact information

2. Discover Transmission Details

After you have analyzed the package of materials, Radian will host another conference call to elicit detailed requirements. At this time we'll also establish regular status calls.

- Review of data requirements and error messaging
- Review process flow and functionality
- Discuss trading partner specific requirements

3. Prepare Systems

In this phase of the project, the interface is developed. Radian will:

- Provide an estimated date for testing the transmission
- Work with our technical team to prepare our systems to receive your data
- Liaise with your technical team to resolve any issues and/or questions
- Provide you with credentials and a URL to the test environment

4. Testing

Radian conducts three levels of testing in a dedicated environment that mirrors our production environment.

- *Functional testing* ensures the process works and that your transmission is processed
- *Quality assurance testing (QA)* ensures the data is stored correctly in our systems
- *User acceptance testing (UAT)* performs one final check of the process

We provide you with a set of comprehensive test cases that include various types of loan and MI Ordering scenarios. We'll work with you to analyze results of UAT testing prior to production release.

5. Production Readiness

When functional, QA and UAT testing is complete, Radian will provide you with credentials and a URL to the production environment, so you can start sending live loans!

Adding a Customer to an Existing MI Interface

1. Configure/Setup of MI interface

We'll assist you with the configuration and setup of your MI Interface with your vendor. Radian will:

- Provide you with credentials and a URL to the our test environment
- Provide you with test cases

2. Testing

We conduct two levels of testing in a dedicated test environment that mirrors Radian's production environment.

- *A Functional test* ensures that communications has been established and configuration and/or setup of the MI Interface is successful
- *User acceptance testing (UAT)* performs one final check of the process

We provide you with a set of comprehensive test cases that include various types of business and MI Ordering scenarios. We'll work with you to analyze results of UAT testing prior to production release.

3. Production Readiness

When functional and UAT testing is complete, Radian will provide you with credentials and a URL to the production environment, so you can start sending live loans!

Radian offers post-production support after the cutover date. Please call Radian Customer Care at 877.723.4261, Monday through Friday, 8 a.m. to 8 p.m. EST.
